

Chère Jean Pierre,

Je vous remercient de nouveau de tout votre travail dur.

Je suis heureux de vous aider si je peux.

Votre anglais est **excellent** et vos instructions pourraient être clairement comprises.

Bien meilleur que mon Français je dois vous dire !

J'ai seulement changé quelques mots en « manière plus anglaise d'expression. »
(C'est d'une femme de Gallois que vous comprenez !)

Mes changements que je montre dans le rouge ci-dessous.

Les notes finies que j'ai ci-dessous avec quelques nombres pour aider l'anglais pauvre encore plus ! Nous avons pauvre Leonard à aider aussi ☺

J'avais l'habitude d'enseigner les enfants très en bas âge ainsi j'essaye de rendre des instructions très simples et faciles. **Vos instructions sont excellentes !**

Malheureusement au moment où j'ai quelques problèmes recevoir mes messages d'E-mail.

J'espère que vous recevez ce message sans risque.

Avec mes vœux meilleurs

Maureen

Dear Jean Pierre

Thank you once again for all your hard work.

I am pleased to help you if I can.

Your English is excellent and your instructions could be clearly understood.

Far better than my French I must tell you !

I changed only some words to a more English manner of expression.

(this is from a Welshman woman you understand!)

I show my changes in the red below.

I have included numbers in the finished notes to help the poor English understand it even better!

We must help poor Leonard too ☺

I used to teach very young children so I try to make all instructions very simple and easy. Your instructions are excellent !

Unfortunately at the moment I have some problems receiving and sending my e-mail messages. I hope you receive this message safely.

With my very Best Wishes

Maureen

Create your personalized screen saver:

It is always wise to save the template in a different folder in its original format, so you can then use it again in the future or should you make any errors when overwriting to create your new personal file.

Create a file in the PNG format (265 x 228) which you name "Titre-Title.png" as a replacement of the existing file.

Create a file in the PNG format (295 x 71) which you name "Nom-Name.png" as a replacement of the existing file.

Create a file in the JPG format (1152 x 864) which you name "Fond.jpg" as a replacement of the existing file, the minimal minimum size value is 1024 pixels x 768 pixels. If the size of your file "Fond.jpg" is 1280 pixels x 1024 pixels for example, it will be necessary to modify the format of screen in 5/4 PC (Menu "Project/Project options " tab Screen), the album will be smaller on the screen.

Create 56 images in the JPG format, the imperative size: Width=382, and Height = 542. Name them " Image 01.jpg " to " Image 56.jpg " Your new image files will be used to overwrite and replace the original files. The serial number is the order in which your image files will appear.

To put PRZ (Pan, rotate and zoom) effects in the album (but please don't over use them), it is necessary to enter the parameters on the object " Rectangle Fond couverture ". (couverture = cover but do not change the name to English) The values allocated to the end of a sight must be the same at the beginning of the following one.

The file to create a screen saver is Screensaver.ptc, all the parameters are set for it is parametrized for that (touch F7 to create the screen saver).

To activate the screen saver, copy the file "Album.scr" in the Directory C:\WINDOWS\System32 (or WINNT on certain machines) then in the options for screen of the Configuration panel, to choose the album in the list of the tab "Screen saver".

In the current version Beta#8, the option " Exit on mouse move" is not implemented yet. It is therefore necessary to use Escape to leave the screensaver. The option is marked, so if the screensaver is recreated compiled with a future version, this function will be taken into account.

To integrate one or several examples of this template into a project, copy one or several of your chosen examples, open your project with the same session of PTE (your project replacing the PTE file of the demo template), and paste your new example in your chosen location (Hawk's method).

You will be probably obliged to change the position of 2 objects representing the edge of the pages which are under (objects "Pile droite" and "Pile gauche")
(droite = right & gauche = left)

It is possible to personalize the other elements (cover, inside pages internal, back cover coverage), but it is always necessary to respect the size and the shape of files, as it is already complicated enough.

Note : the maximum total file size in graphic's card memory is lower than 25 Mb, this project will most certainly run with 32 Mb graphic cards being of graphic memory.

Create your personalized screen saver:

It is always wise to save the template in a different folder in its original format, so you can then use it again in the future or should you make any errors when overwriting to create your new personal file.

1. Create a file in the PNG format (265 pixels x 228 pixels) which you name "Titre-Title.png" as a replacement of the existing file.
2. Create a file in the PNG format (295 pixels x 71 pixels) which you name "Nom-Name.png" as a replacement of the existing file.
3. Create a file in the JPG format (1152 x 864) which you name "Fond.jpg" as a replacement of the existing file, the minimum size is 1024 pixels x 768 pixels.
If the size of your file "Fond.jpg" is 1280 pixels x 1024 pixels for example, it will be necessary to modify the format of screen in 5/4 PC (Menu "Project/Project options " tab Screen), the album will be smaller on the screen.
4. Create 56 images in the JPG format, the imperative size: Width=382 pixels , and Height = 542 pixels . Name them " Image 01.jpg " to " Image 56.jpg " Your new image files will be used to overwrite and replace the original files. and to put them as a replacement of the existing files. The serial number is the order in which your image files will appear of appearance of the images.
5. To put PRZ (Pan, rotate and zoom) effects in the album (but please don't over use abuse of them), it is necessary to enter the parameters on the object " Rectangle Fond

couverture ". (couverture = cover but do not change the name to English) The values allocated to the end of a sight must be the same at the beginning of the following one.

6. The file to create a screen saver is Screensaver.pte, **all the important parameters are set for it is parametrized for** that (touch F7 to create the screen saver).

7. To activate the screen saver, copy the file "Album.scr" in the Directory C:\WINDOWS\System32 (or WINNT on certain machines) then in the options for screen of the Configuration panel, choose the album in the list of the tab "Screen saver".

8. In the current version Beta#8, the option " Exit on mouse move" is not implemented yet. It is therefore necessary to use Escape to leave the screensaver. The option is marked, so if the screensaver is recreated with a future version, this function will be taken into account.

9. To integrate one or several examples of this template into a project, copy one or several of your chosen examples, open your project with the same session of PTE (your project replacing the PTE file of the demo template), and paste your new example in your the chosen location (Hawk's method).

10. You will be probably obliged to change the position of 2 objects representing the edge of the pages which are under (objects "Pile droite" and "Pile gauche")

(droite = right & gauche = left)

It is possible to also personalize the other elements (cover, inside pages, back cover), but it is always necessary to respect the size and the shape of files, as it is already complicated enough.

Note :

The maximum total file size in the graphic's card memory is lower than 25 Mb, this project will most certainly run with 32 Mb graphic cards
